

GREENHOUSES

BY OTIQ

TIMELESS CRAFTSMANSHIP FOR YOUR GARDEN

Bespoke greenhouses made from recycled
French glass and steel, delivered and
installed worldwide

THE STORY

THE CHARACTER OF A HUNDRED YEARS OF SUN

Authentic French glass and steel from a vanished craft, reborn as a greenhouse you'll find nowhere else.

A material that can never be made again

For decades, these French glass and steel structures sheltered prized grape harvests from the elements. Shaped by sun, season and craftsmanship, the material developed its own character. Structures like these are no longer built today, which means every piece carries a fragment of history within it.

A new chapter for a timeless material

OTIQ gives this remarkable glass and steel a second life, shaped into a fully bespoke greenhouse. With close attention to detail, proportion and finish, a space emerges where past and future meet. A place designed not just for today, but built to last for generations.

BESPOKE

IRREPLACEABLE MATERIAL, BORDERLESS POSSIBILITIES

From an intimate garden room to an impressive orangery, every design is shaped around your space, not the other way around

No standard size

No garden, architecture or ambition is the same. That is why every OTIQ greenhouse takes shape from the place it will stand: as a pool house beside the terrace, as a studio for every season, as a guest house with a character of its own, or as a winter garden you can enjoy all year round. The design is shaped entirely around its surroundings.

A material you have to experience

Photographs show the lines and the details, but not how the material comes to life. Watch the video to see how light moves through the historic glass, and how an OTIQ greenhouse becomes part of a carefully designed setting.

Also as part of a larger design: we work directly with garden and landscape architects, more on that on the next page.

FROM DESIGN TO INSTALLATION, WHEREVER IN THE WORLD

A carefully managed process with personal contact, from the first sketch to installation on site

Pascal Rust
Owner, OTIQ

- 01 Introduction & price indication**
A personal conversation about your wishes, followed by an initial price indication.
- 02 Design & final quote**
We develop the design further, and you receive the final quote.
- 03 Technical preparation**
We provide the drawings for the foundation, your contractor handles the work on site.
- 04 Restoration process**
Every piece of old glass and steel is carefully inspected. The metal is treated while preserving the patina it has gained over the years. All of this comes together in your unique, timeless greenhouse.
- 05 Worldwide delivery & installation**
Installation is carried out by a team of expert greenhouse builders from Belgium, wherever in the world, with the same precision.

COLLABORATE

GIVE YOUR DESIGN A STORY

A partnership in which historic material, bespoke craftsmanship and expertise enrich your design with a story of its own.

With you from the first sketch

We think alongside you from the first design through to installation.

A story, ready to share

Images and background information you can use directly in your own proposal.

Business terms, tailored to you

Rates, lead times and site visits are agreed individually for each partnership.
